Milestones Supplemental Guide

This document provides additional guidance and examples for the Dermatopathology Milestones. This is not designed to indicate any specific requirements for each level, but to provide insight into the thinking of the Milestone Work Group.

Included in this document is the intent of each Milestone and examples of what a Clinical Competency Committee (CCC) might expect to be observed/assessed at each level. Also included are suggested assessment models and tools for each subcompetency, references, and other useful information.

Review this guide with the CCC and faculty members. As the program develops a shared mental model of the Milestones, consider creating an individualized guide (Supplemental Guide Template available) with institution/program-specific examples, assessment tools used by the program, and curricular components.

Additional tools and references, including the Milestones Guidebook, Clinical Competency Committee Guidebook, and Milestones Guidebook for Residents and Fellows, are available on the Resources page of the Milestones section of the ACGME website.

Patient Care 1: Visual Recognition – Neoplastic Dermatopathology Overall Intent: To recognize and diagnose tumors	
Milestones	Examples
Level 1 Identifies basic categories of cutaneous neoplasms	Differentiates normal structures (e.g., adnexae) from neoplasms Identifies origin of well differentiated neoplasms (e.g., keratinocytic, melanocytic, sebaceous, adnexal, neural, adipocytic, etc.)
Recognizes and differentiates normal and abnormal histology relevant to neoplastic dermatopathology	Identifies cytologic atypia Identifies tumor necrosis
Level 2 Diagnoses common presentations of common cutaneous neoplasms	 Categorizes neoplasms as likely benign or likely malignant Diagnoses straightforward examples of cysts, basal cell carcinomas, squamous cell carcinomas, seborrheic keratoses, nevi, atypical nevi, melanomas, etc.
Forms a histopathologic differential diagnosis for most common cutaneous neoplasms	 For neoplasms with a "paisley tie" appearance, forms a differential diagnosis that includes syringoma, microcystic adnexal carcinoma, desmoplastic trichoepithelioma, and morpheaform basal cell carcinoma For a dermal spindle cell neoplasm, forms a differential diagnosis that includes spindled squamous cell carcinoma, desmoplastic melanoma, atypical fibroxanthoma, and leiomyosarcoma
Level 3 Diagnoses uncommon presentations of common cutaneous neoplasms	Diagnoses uncommon variants of melanocytic neoplasms (e.g., angiomatoid Spitz nevus, epithelioid blue nevus, desmoplastic melanoma)
Develops a differential diagnosis for uncommon neoplasms	For a dermal neoplasm with hemorrhage, spindle cells, and vascular spaces, forms a differential diagnosis that includes angiosarcoma, Kaposi sarcoma, spindle cell hemangioma, and aneurysmal dermatofibroma
Level 4 Diagnoses uncommon cutaneous neoplasms	Diagnoses endocrine mucin producing sweat gland carcinoma, porocarcinoma, lymphoepithelioma-like carcinoma, cellular neurothekeoma, epithelioid sarcoma, and pleomorphic lipoma
Identifies subtle clues in the diagnosis of cutaneous neoplasms	Identifies "ropey" collagen of a spindle cell lipoma, hyalinized stroma of a hidradenoma, "poroid" cytology of a poroma, and intranuclear pseudoinclusions in a poorly differentiated metastatic melanoma
Level 5 Serves as a role model in the practice of neoplastic dermatopathology; sought out by other health care providers as a consultant	Is sought for expertise on melanomas, soft tissue tumors, lymphoma, etc. by other dermatopathologists

	Consistently asked for consultation, lectures, and/or teaching on neoplastic (or specific category within) dermatopathology
Assessment Models or Tools	 American Society of Dermatopathology (ASDP) Fellowship In-Service Assessment Direct observation Unknown slide exams
Curriculum Mapping	•
Notes or Resources	 This milestone is intended to measure the fellow's ability to visually recognize tumors and visually recognize histologic features. It does not measure book knowledge of diagnostic criteria or understanding of disease pathogenesis. The American Society of Dermatopathology (ASDP). Patient Care 2: Visual Recognition – Inflammatory and Non-Neoplastic Dermatopathology Overall Intent: To visually recognize histologic features and inflammatory and non-neoplastic processes	
Milestones	Examples
Level 1 Identifies basic histopathologic inflammatory patterns and non-neoplastic processes	Categorizes straightforward cases into the appropriate reaction pattern (e.g., spongiotic, interface, blistering, vasculitic)
Differentiates between normal histology and abnormal histopathology relevant to inflammatory and non-neoplastic skin diseases	Identifies spongiosis, apoptotic keratinocytes, parakeratosis, eosinophils, red blood cell extravasation, and mucin
Level 2 Diagnoses common presentations of common inflammatory and non-neoplastic skin diseases	Diagnoses psoriasis, lichen planus, bullous pemphigoid, small-vessel vasculitis, arthropod assault, epidermal nevus, and spongiotic dermatitis
Forms a histopathologic differential diagnosis for most common inflammatory and non-neoplastic skin diseases	For psoriasiform dermatitis with neutrophils in the stratum corneum, forms a differential diagnosis that includes psoriasis, tinea, impetigo, candida, syphilis, and seborrheic dermatitis
Level 3 Diagnoses uncommon presentations of common inflammatory and non-neoplastic skin diseases	 Diagnoses spongiotic manifestation of psoriasis, granulomatous syphilis, and psoriatic alopecia Differentiates mycosis fungoides from spongiotic dermatitis
Develops a differential diagnosis and work-up plan for uncommon inflammatory and non-neoplastic skin diseases	When encountering a combined reaction pattern, such as lichenoid and granulomatous dermatitis, considers syphilis, drug eruption, and mycobacterial infection, recommending T. pallidum immunostain, Fite or Ziehl-Neelsen stains, and obtains medication history
Level 4 Diagnoses uncommon inflammatory and non-neoplastic skin diseases	Diagnoses Flegel's disease (hyperkeratosis lenticularis perstans), incontinentia pigmenti, Still's disease, and tumor necrosis factor-associated alopecia
Identifies subtle clues in the diagnosis of inflammatory and non-neoplastic skin diseases	Recognizes pseudovacuolar change in bullous pemphigoid
Level 5 Serves as a role model in practice of inflammatory and non-neoplastic dermatopathology; sought out by other health care providers as a consultant	 Sought for expertise on inflammatory dermatopathology by other dermatopathologists Consistently asked to consult, lecture, and/or teach on inflammatory and non-neoplastic dermatopathology
Assessment Models or Tools	 ASDP Fellowship In-Service Assessment Direct observation Unknown slide exams

Patient Care 3: Ancillary Studies Overall Intent: To select and correctly interpret the relevant ancillary studies	
Milestones	Examples
Level 1 Identifies types of ancillary studies (e.g., special stains, immunohistochemistry, immunofluorescence, molecular testing) used in establishing histopathologic diagnoses	Explains the limitations of hematoxylin and eosin interpretation, and when ancillary studies would be helpful
Level 2 Selects routine ancillary studies (e.g., special stains, immunohistochemistry, molecular testing) in the context of the histopathologic findings	 Explains the advantages and limitations of nuclear versus cytoplasmic markers (e.g., Sox10 and Melan-A) in the evaluation of melanocytic neoplasms Orders an appropriate panel of immunostains for atypical fibroxanthoma
Level 3 Interprets routine ancillary studies (e.g., special stains, immunohistochemistry, immunofluorescence, molecular testing) in the context of the clinical and histopathologic findings	 Recognizes potential pitfalls in the selection and interpretation of immunostains, such as a lack of specificity of BerEP4 for basal cell carcinoma or partial CD34 (a membrane protein) expression in a cellular dermatofibroma Interprets routine direct immunofluorescence studies in context of clinical and histopathologic findings
Level 4 Selects and interprets complex ancillary studies (e.g., special stains, immunohistochemistry, immunofluorescence, molecular testing) in the context of the clinical and histopathologic findings	 Orders and interprets complex batteries of immunostains and molecular testing for melanocytic lesions, or work-up of cutaneous lymphomas Interprets complex direct immunofluorescence studies in context of clinical and histopathologic findings
Level 5 Serves as role model in the selection, interpretation, and teaching of ancillary studies, including cost-effective utilization	Validates a new immunostain for clinical use Consistently asked for to consul, lecture, and/or teach on ancillary studies in dermatopathology
Assessment Models or Tools	Direct observationEvaluation of reports

Patient Care 4: Reporting	
Overall Intent: To generate effective pathology reports for simple and complex cases while using nuanced language and providing	
appropriate recommendations Milestones	Examples
Level 1 Identifies the key elements of a report and demonstrates understanding of timely reporting	Engages with attending physician to promote timely turnaround time
Identifies the importance of a complete pathology report for optimal patient care	• Ensures the key elements of a surgical pathology report are present including clinical history, source of specimen, surgical procedure, ancillary study results, gross description, microscopic description, and diagnosis
Level 2 With assistance, generates a timely report for a simple case	Develops a report for simple cases such as basal cell carcinoma, banal nevus, and granuloma annulare
Identifies implications of the diagnosis in the report and makes simple recommendations	Recognizes and reports margin status and implications of a biopsy scar extending to the margin of a melanoma excision
Level 3 With assistance, generates a timely report that includes synoptic templates and/or ancillary testing for a complex case; independently generates reports for a simple case	Develops a report for a more complex specimen such as a melanoma, including College of American Pathologists (CAP) synoptic template
With assistance, generates an amended/addended report that includes updated information	Reports amendments and addendums for simple cases such as special stains for infectious work-up, with assistance
With assistance, generates a report that includes the language of uncertainty, as appropriate	Generates a report with assistance including language of uncertainty, such as in atypical squamous proliferations
Level 4 Independently generates timely integrated reports for complex cases	 Independently develops a surgical pathology report for complex cases with potential systemic association or cancer predisposition including microsatellite instability in relevant sebaceous tumors
Generates an amended/addended report and documents communication with the clinical team, as appropriate	Incorporates clinical findings in interpretation and recommendations

Independently generates a report that includes the language of uncertainty and complex recommendations Level 5 Serves as a role model in creating reports that express the ambiguity and uncertainty for a complex case Assessment Models or Tools	 Generates reports, amendments, or addendums with complex interpretations integrating multiple test results including molecular, and provides recommendations for any follow-up management Consistently generates complex consultation reports incorporating therapeutic implications Direct observation
Assessment Models of Tools	Evaluation of reports

Medical Knowledge 1: Neoplastic Dermatopathology Overall Intent: To possess knowledge of the clinical presentation, histopathologic features, and relevant pathogenesis of cutaneous neoplasms	
Milestones	Examples
Level 1 Demonstrates knowledge of the differences between benign and malignant skin neoplasms	 Describes specific histopathologic features that help differentiate benign and malignant neoplasms including cytomorphology, differentiation, and growth pattern Discusses the basic features that differentiate seborrheic keratosis from squamous cell carcinoma
Level 2 Demonstrates knowledge of the clinical presentation and histopathologic features of common skin neoplasms	 Describes clinical and diagnostic histopathologic features that distinguish basal cell carcinoma from squamous cell carcinoma of common skin neoplasms including dermatofibroma, neurofibroma, basal cell carcinoma, squamous cell carcinoma, melanocytic nevi, and melanoma Discusses the clinical and histopathologic features that distinguish, conventional nevi from unequivocal melanoma
Level 3 Demonstrates knowledge of the clinical presentation and histopathologic features of uncommon skin neoplasms	 Describes the clinical features and histopathologic features that distinguish desmoplastic melanoma from dermatofibrosarcoma Discusses the clinical and histopathologic features that distinguish nodular fasciitis from a sarcoma
Level 4 Demonstrates an in-depth knowledge of the pathogenesis, clinical presentation, histopathologic features, and biologic behavior of common and uncommon skin neoplasms	 Discusses etiologies of idiopathic versus post-radiation angiosarcoma Explains the sequential genetic aberrations in Spitz tumors leading from Spitz nevus to atypical Spitz tumor and Spitz melanoma
Level 5 Serves as a consultant for pathogenesis, clinical presentation, histopathologic features, and biologic behavior of uncommon and rare skin neoplasms	 Provides expert-level knowledge of the risk factors, molecular/genetic pathogenesis, clinical features, diagnostic histopathologic features, and clinical outcomes of uncommon and rare skin neoplasms including adnexal tumors, cutaneous lymphomas, soft tissue neoplasms, and neoplastic syndromic associations; is sought out by other dermatopathologists Identified as a cutaneous lymphoma specialist, soft tissue pathologist, or specialist in inherited skin disease-associated neoplasms
Assessment Models or Tools	 ASDP Fellowship In-Service Assessment Direct observation Discussions at multidisciplinary conferences Participation in didactic conferences Written examinations

--	--

Medical Knowledge 2: Inflammatory and Non-Neoplastic Dermatopathology Overall Intent: To possess knowledge of the clinical presentation, histopathologic features, and relevant pathogenesis of inflammatory and non-neoplastic skin diseases	
Milestones	Examples
Level 1 Demonstrates knowledge of the basic histopathologic patterns of inflammatory skin diseases and non-neoplastic processes	Describes major histopathologic patterns of inflammation in the skin including spongiotic, psoriasiform, lichenoid/interface, perivascular, interstitial, periadnexal, vesiculobullous, granulomatous, vasculitic/vasculopathic, and panniculitic
Recognizes the importance of the clinical presentation in diagnosing inflammatory and non-neoplastic skin diseases	Recognizes the presence of deposited materials, such as amyloid, cosmetic fillers and tattoo pigment, within the skin
Level 2 Demonstrates knowledge of common skin diseases that correspond to inflammatory and non-neoplastic patterns and ability to develop a limited differential diagnosis	 Describes specific histopathologic features of psoriasis and distinguishes psoriasis from eczematous dermatitis Generates a limited differential diagnosis for vacuolar interface dermatitis Distinguishes lichen planus from lichen drug eruption Discusses the clinical and histopathologic features that differentiate granuloma
Demonstrates knowledge of the clinical presentation of common inflammatory and non-neoplastic skin diseases	annulare from sarcoidosis
Level 3 Demonstrates knowledge of uncommon skin diseases that correspond to inflammatory and non-neoplastic patterns and able to develop an expanded differential diagnosis	 Describes clinical and histopathologic features of malignant atrophic papulosis Generates an expanded differential diagnosis for epidermal acantholysis based on a specific pattern of inflammation that includes both common and uncommon inflammatory skin diseases
	Discusses the clinical, histopathologic, and immunofluorescence features of paraneoplastic pemphigus
Demonstrates knowledge of the clinical presentation of uncommon inflammatory and non-neoplastic skin diseases	Discusses the clinical and histopathologic features that distinguish dermatitis herpetiformis from bullous pemphigoid, pityriasis rubra pilaris from psoriasis, and leukemia cutis from a benign inflammatory infiltrate
	 Develops an expanded differential diagnosis for a subepidermal bulla, superficial and deep inflammatory infiltrate, psoriasiform changes and epidermal interface alteration
	Distinguishes lichen planopilaris form alopecia aretata
Level 4 Demonstrates an in-depth knowledge of the pathogenesis, histopathologic features of common and uncommon inflammatory and non-neoplastic skin diseases	 Discusses the molecular/genetic abnormalities in epidermolysis bullosaidep Discusses the clinical presentation, laboratory findings and histopathologic features that distinguish eosinophilic granulomatosis with polyangiitis from granulomatosis with polyangiitis

Correlates the clinical presentation of inflammatory and non-neoplastic skin diseases with the histopathologic patterns	Discusses the clinical and histopathologic features that differentiate methotrexate toxicity from erythema multiforme
Level 5 Serves as a consultant for the pathogenesis, clinical presentation, and histopathologic features of uncommon and rare inflammatory and non-neoplastic skin diseases	 Provides expert-level knowledge of the molecular/genetic abnormalities, pathogenesis, various clinical presentations, diagnostic histopathologic features, and clinical course of uncommon and rare inflammatory skin diseases; is sought out by other dermatopathologists Serves as an expert in inherited skin diseases with inflammatory skin lesions, paraneoplastic skin diseases, and drug associated side effects/toxicities
Assessment Models or Tools	 ASDP Fellowship In-Service Assessment Direct observation Discussions at multidisciplinary conferences Participation in didactic conferences Written examinations
Curriculum Mapping	•

Boca Raton, FL: Taylor and Francis Group; 2012. ISBN:9781841847337.

Medical Knowledge 3: Ancillary Studies Overall Intent: To possess knowledge of the indications, limitations, and methodology of ancillary tests in dermatopathology	
Milestones	Examples
Level 1 Understands available ancillary studies (e.g., special histochemical stains, immunohistochemistry, immunofluorescence, molecular testing) and basics of tissue processing	 Identifies distinctions between classes of ancillary studies, such as special versus immunohistochemical stains versus immunofluorescence versus molecular diagnostic studies Describes the sequence of steps in routine histology, including fixation, processing, embedding, and microtomy
Level 2 Demonstrates knowledge of the appropriate use for ancillary studies (e.g., special histochemical stains, immunohistochemistry, immunofluorescence, molecular testing)	Discusses the indications for using common histochemical stains, immunohistochemistry, and immunofluorescence in the diagnosis of common skin diseases Discusses the general appropriate use of molecular testing
Demonstrates knowledge of expected ancillary study results in common skin diseases	Describes common immunohistochemical stains of each cell lineage (e.g., S100 and Sox- 10 in neural lesions, Mart-1 in melanocytic lesions, keratins in carcinomas, CD31 and erg in vascular lesions)
Level 3 Demonstrates knowledge of the fundamental techniques, pitfalls, and artifacts in routine ancillary studies	 Describes the fundamental techniques and steps involved in histochemical stains, immunohistochemistry, and immunofluorescence Discusses the indications for using uncommon histochemical stains and panels of immunohistochemistry and appropriate scenarios of when to use testing methodologies (e.g., LNA in Kaposi sarcoma, MUM-1 in diffuse large C-cell lymphoma, c-Myc in post-radiation angiosarcoma) Describes technical errors and artifacts in histochemical stains and technical and potential interpretive errors in evaluating immunohistochemistry
Demonstrates knowledge of appropriate use and expected ancillary study results in uncommon skin diseases	Discusses the indication for using specific molecular tests in diagnosing skin diseases and appropriate scenarios of when to use testing methodologies Recognizes regularly identified molecular events in benign and malignant lesions
Level 4 Demonstrates knowledge of the interpretation and troubleshooting of complex ancillary studies	 Describes technical errors and artifacts of molecular tests as applied to individual cases Describes the fundamental techniques of molecular tests, including genetics studies, polymerase chain reaction, and fluorescence in situ hybridization (FISH) Describes the appropriate use of immunohistochemical and molecular techniques when applied to ambiguous spitzoid neoplasms

Demonstrates knowledge of potentially conflicting ancillary study results	 Describes suitable specimen adequacy for molecular and other ancillary studies Discusses potentially confusing immunohistochemical results (e.g., Ber-EP4, B-cell lymphoma 2, Paired Box 5 (PAX5) in Merkel cell carcinoma)
Level 5 Teaches the principles, pitfalls, and expected disease-related results of ancillary studies (e.g., special histochemical stains, immunohistochemistry, immunofluorescence, molecular studies)	 Provides expert-level knowledge to other health care professionals in the use and interpretation of histochemical stains, immunohistochemistry, and molecular studies relevant to diagnosing skin diseases Advises on immunohistochemistry panels, correlates ancillary test data for other health care professionals, and interprets molecular tests in the context of skin diseases
Assessment Models or Tools	 ASDP Fellowship In-Service Assessment Direct observation Written examinations

Systems-Based Practice 1: Patient Safety and Quality Improvement (QI)	
Overall Intent: To engage in the analysis and management of patient safety events, including relevant communication with patients, families, and health care professionals; to conduct a QI project	
Milestones	Examples
Level 1 Demonstrates knowledge of common patient safety events	 Identifies patient safety events, reporting pathways, and QI strategies, but has not yet participated in such activities Explains the differences between pre-analytic and analytic errors
Demonstrates knowledge of how to report patient safety events	Describes how to report errors or near misses in the local environment, but has not yet done it
Demonstrates knowledge of basic QI methodologies and metrics	Describes root cause analysis and the Swiss cheese model of errors
Level 2 Identifies system factors that lead to patient safety events	 Understands what system stressors are likely to increase chances of error including new employees, lack of adherence to protocols, understaffing, distracted employees, lack of appropriate supervision, and lack of sense of responsibility Identifies pre-analytic errors including labeling in office, floaters, incomplete sections/misembedding, specimen being placed in incorrect collection bottle, misaccessioning, specimen being placed in incorrect cassette, histotechnician placing wrong tissue on a given slide, matching the wrong slide with a patient's paperwork, transcription, etc.
Reports patient safety events through institutional reporting systems (simulated or actual)	Identifies and reports a patient safety issue (real or simulated), along with system factors contributing to that issue
Describes departmental and institutional QI initiatives	Identifies current improvement initiatives within their scope of practice
Level 3 Participates in analysis of patient safety events to identify problem (simulated or actual)	Reviews a patient safety event (e.g., preparing for morbidity and mortality presentations, joining a root cause analysis group) and communicates results to involved parties, supervisors, and or clinicians (as appropriate for the specific event)
Participates in disclosure of patient safety events to clinicians (simulated or actual)	Participates in a QI project, though they may not have yet designed a QI project
Participates in departmental and institutional QI initiatives	Communicates with clinicians regarding a lost or damaged specimen

Level 4 Conducts analysis of patient safety events and offers error prevention strategies (simulated or actual)	Collaborates with a team to lead the analysis of a patient safety event and can competently communicate with stakeholders about those events
Discloses patient safety events to clinicians (simulated or actual)	Designs a quality improvement project to reduce turnaround time for patients receiving skin biopsies during inpatient consultation and communicates study results to stakeholders
Identifies, develops, implements, and analyzes a QI project	
Level 5 Actively engages teams and processes to modify systems to prevent patient safety events	Competently assumes a leadership role at the departmental or institutional level for patient safety and/or QI initiatives, and initiates action or call attention to the need for action
Role models or mentors others in the disclosure of patient safety events	
Creates, implements, and assesses QI initiatives at the institutional or community level	
Assessment Models or Tools	 Direct observation Documentation of QI or patient safety project processes or outcomes
	E-module multiple choice testsMultisource feedback
	Portfolio Reflection
	Simulation

Systems-Based Practice 2: Systems Navigation for Patient-Centered Care	
Overall Intent: To effectively navigate the health care system, including the interdisciplinary team and other care providers, to adapt care to	
a specific patient population to ensure high-qua	Examples
Level 1 Demonstrates knowledge of case	Identifies the members of the interprofessional team, including transcriptionists,
coordination	histotechnologists, laboratory technicians, pathologist assistants, consultants, other specialty physicians, nurses, and consultants, and describes their roles but is not yet routinely using team members or accessing all available resources
Identifies key elements for safe and effective transitions of care	Lists the essential components of an effective sign-out and care transition including obtaining additional information from a clinician or the medical record, and handing off partially completed ("leftover") cases when switching services or starting vacation
Level 2 Coordinates care of patients in routine cases effectively using interprofessional teams	 Works with transcriptionists, technologists, and pathologist assistants to effectively produce a timely and accurate report with appropriate gross description and sections Obtains any additional necessary clinical history from the medical record or speaking to the clinicians
Performs safe and effective transitions of care in routine situations	 Performs a routine case sign-out but still needs direct supervision to identify and appropriately triage cases or calls (priority versus non-priority case or call) Effectively communicates and prepares a routine "leftover" case for sign-out with special stains or immunohistochemistry from another dermatopathologist
Level 3 Coordinates care of patients in complex cases effectively using interprofessional teams	 At interdisciplinary tumor boards and patient grand rounds, engages in appropriate discussion of patient care testing options and impact on therapy for complex pathologic cases Appreciates the utility, order, and synthesized results from multiple different testing modalities to reach an accurate diagnosis (e.g., a lymphoid infiltrate requiring immunohistochemical stains and gene rearrangement studies)
Performs safe and effective transitions of care in complex situations	 Shows a case to a consultant and accurately understands and conveys the consultant's opinion to the faculty dermatopathologist responsible for the case, including a case requiring consultation by a hematopathologist Effectively communicates and prepares a complex "leftover" case for sign-out with ancillary studies from another dermatopathologist
Level 4 Models effective coordination of patient- centered care among different disciplines and specialties	Role models and educates residents and colleagues regarding the engagement of appropriate interprofessional team members, as needed for each patient and/or case, and ensures the necessary resources have been arranged

Models and advocates for safe and effective transitions of care within and across health care delivery systems	Consistently relays any pertinent information (at an advanced level) during the hand-off of any "leftover" case, regardless whether that information is clinical or histologic in nature
Level 5 Analyzes the process of care coordination and leads in the design and implementation of improvements	Works with all members of the clinical and laboratory team to deliver excellent patient care on cases of any level of complexity, and works with the team to drive advancements in testing modalities offered as well as to drive improved efficiency and accuracy
Improves quality of transitions of care within and across health care delivery systems to optimize patient outcomes	Works with a QI mentor to identify better hand-off tools for "leftover" cases and more effective protocols for tumor boards and grand rounds
Assessment Models or Tools	 Case management quality metrics and goals mined from electronic health records (EHR), anatomical pathology or clinical pathology laboratory informatics systems Chart review Direct observation (including discussion during rounds, tumor boards, case work-up and case presentations) Multisource feedback Report review

and the health system's performance	Francisco
Level 1 Identifies key components of the complex health care system	Examples ● Recognizes the multiple, often competing forces, in the health care system (e.g., names systems and providers involved in test ordering)
Describes basic health payment systems and practice models	 Recognizes there are different payment systems, such as Medicare, Medicaid, Veterans Affairs (the VA), and commercial third-party payors With direct supervision, completes a report following a routine patient specimen and applies appropriate coding in compliance with regulations
Level 2 Describes how components of a complex health care system are interrelated, and how this impacts patient care	Understands the impact of health plans on testing workflow and reimbursement
Documents testing details and explains the impact of documentation on billing and reimbursement	 Occasionally thinks through clinical redesign to improve quality; does not yet modify personal practice to enhance outcomes Completes a report following a routine patient specimen and applies appropriate coding in compliance with regulations, with oversight
Level 3 Discusses how individual practice affects the broader system (e.g., test utilization, turnaround time)	 Shepherds cases through to completion in a timely manner, with understanding of effect of timing of ordering ancillary studies on total turnaround time Understands, accesses, and analyzes personal performance; relevant data may include: Cases prepared Cases with stains ordered Surgical pathology or clinical case logs
Engages with clinicians in shared decision making, such as preauthorization for complex testing; has a working knowledge and application of appropriate use criteria within the field of dermatopathology	Uses shared decision making and adapts the choice of the most cost-effective testing depending on the relevant clinical needs and follows appropriate use criteria guidelines
Level 4 Manages various components of the complex health care system to provide efficient and effective patient care and transition of care	Works collaboratively with the department on a QI project
Practices and advocates for cost-effective patient care	• Identifies when a stain should or should not be ordered based on overall patient care

Level 5 Advocates for or leads systems change that enhances high-value, efficient, and effective patient care and transition of care	Performs an analysis of laboratory practices to identify and modify areas of improvement to make laboratory testing more efficient
Participates in health policy advocacy activities	
Assessment Models or Tools	Audit of test usage
	Direct observation
	QI project

Systems-Based Practice 4: Accreditation, Compliance, and Quality Overall Intent: To gain in-depth knowledge of the components of laboratory accreditation, regulatory compliance, and quality management **Milestones Examples** Level 1 Discusses various laboratory • Recognizes external versus internal control tissue for daily quality control accreditation agencies Discusses the need for quality control • Appreciates clinical significance of control measures • Understands the clinical significance and distinction between regulation and accreditation • Assesses tissue controls on immunohistochemical and special stains Level 2 Understands the importance of ongoing laboratory accreditation and regulatory compliance Participates in daily quality control Level 3 Demonstrates knowledge of the • Attends departmental quality assurance/quality control meetings including tumor boards, components of laboratory accreditation and morbidity and mortality (M and M) conferences, and/or accreditation/regulatory summation regulatory compliance, either through training or meetings experience Demonstrates knowledge of the components of a laboratory quality management plan Level 4 Identifies the process for achieving • Completes QI project accreditation and maintaining regulatory compliance Reviews the quality management plan to identify • Actively participates in departmental quality assurance/quality control meetings including areas for improvement tumor boards, M and M conferences, and/or accreditation/regulatory summation meetings Level 5 Participates in an internal or external • Completes inspector training for accreditation agency (e.g., College of American laboratory inspection Pathologists [CAP]) to understand process for achieving/maintaining regulatory/accreditation compliance • Serves on a committee for an institutional, regional, or national accreditation or quality control agency Creates and follows a comprehensive quality • Performs mock or self-inspection using a CAP checklist management plan Assessment Models or Tools • Assignment of duties for departmental or hospital quality assurance/quality control

committees

	 Evaluations Planning and completion of QI projects Presentation at tumor boards and or M and M conferences
Curriculum Mapping	
Notes or Resources	CAP. Inspector Training Options. https://www.cap.org/laboratory-
	improvement/accreditation/inspector-training. 2021.

Practice-Based Learning and Improvement 1: Evidence-Based Practice Overall Intent: To incorporate evidence into clinical practice	
Milestones	Examples
Level 1 Demonstrates how to locate evidence applicable to the diagnostic work-up of routine cases	Completes assigned readings on common diagnostic dilemmas and algorithms from assigned reference book chapters
Level 2 When prompted, locates and applies evidence to guide the diagnostic work-up of complex cases	After encountering a novel diagnostic dilemma at sign-out, completes assigned readings from reference books and journals, and applies this knowledge when subsequently encountering a similar dilemma
Level 3 Proactively locates and applies evidence to guide the diagnostic work-up of complex cases	Independently locates relevant material from reference books and journals to help establish a differential diagnosis in cases with unusual or ambiguous clinical, histopathologic, or molecular findings, and brings this material to sign-out
Level 4 Consistently locates and applies the best available evidence to guide the diagnostic work-up of complex cases	• Independently locates relevant material from reference books and journals, selecting only the most pertinent information to present at sign-out along with an accurate diagnosis based on the material
Level 5 Consistently and critically appraises and applies evidence, even in the face of uncertainty and/or conflicting evidence, to guide the diagnostic work-up of complex cases	 Appreciates the limitations of evidence-based literature and conducts a thorough literature review, evaluating the comparative merits of conflicting data, and arrives at a reasonable diagnosis
Assessment Models or Tools	 Direct observation Evaluation of drafted preliminary and final reports Evaluation of presentations
Curriculum Mapping	•
Notes or Resources	U.S. National Library of Medicine. PubMed Tutorial. https://www.nlm.nih.gov/bsd/disted/pubmedtutorial/cover.html. 2021.

Practice-based Learning and Improvement 2: Reflective Practice and Commitment to Personal Growth	
Overall Intent: To seek clinical performance information to improve patient care; reflect on all domains of practice, personal interactions, and	
	atients (reflective mindfulness); develop clear objectives and goals for improvement
Milestones	Examples
Level 1 Demonstrates openness to receiving performance data	 Respectfully accepts written and verbal feedback, acknowledging gaps between program expectations and actual performance
Identifies the gap(s) between expectations and actual performance	
Level 2 Accepts feedback with humility	Respectfully accepts written and verbal feedback and takes responsibility for narrowing performance gaps by establishing an educational plan
Designs a learning plan to address the gap(s) between expectations and actual performance	
Level 3 Seeks performance data episodically	Establishes an educational plan and shows gradual improvement (narrowing of performance gaps)
Implements a learning plan to narrow the gap(s)	Asks for feedback on drafted preliminary and final reports and clarifications on any
between expectations and actual performance	modifications or corrections made by the faculty • Asks for feedback on verbal presentations at tumor boards and grand rounds
Level 4 Seeks performance data regularly and adapts performance based on feedback	Uses data from fellow in service examinations, slide quizzes provided by the fellowship program, and feedback from online assessments to gauge the success of the reading plan, making necessary adjustments
Measures effectiveness of a learning plan using performance feedback data and narrows the	
gap(s) between expectations and actual performance	
Level 5 Role models seeking and adapting to feedback	 Mentors more junior residents on the dermatopathology service by identifying gaps in their knowledge and/or performance and helps them address those gaps
Coaches others on designing and implementing	
an effective learning plan	
Assessment Models or Tools	Direct observation
	Multisource feedback
	Review of learning plan
0 : 1 14 :	Self-assessments

Professionalism 1: Professional Behavior and Ethical Principles	
Overall Intent: To recognize and address lapses in ethical and professional behavior, demonstrate ethical and professional behaviors, and	
use appropriate resources for managing ethical	
Milestones	Examples
Level 1 Identifies and describes potential triggers for professionalism lapses	 Identifies that being tired can cause a lapse in professionalism Identifies that not answering emails has adverse effects on patient care and on professional relationships
Demonstrates knowledge of medical ethical principles	Articulates the principle of "do no harm"
Level 2 Demonstrates professional behavior in routine situations	 Informs faculty members of late arrival due to delay from inpatient consultation Articulates recommending excisions in a dermatopathology report may represent a conflict of interest
Analyzes straightforward situations using ethical principles	Accepts responsibility for being late to teaching conference without making excuses or blaming others
Level 3 Demonstrates professional behavior in complex or stressful situations; takes responsibility for own professionalism lapses	Appropriately responds to a diagnostic discrepancy in internal and external review of cases
Analyzes complex situations using ethical principles	 Recognizes conflict of interest inherent to overutilization Appropriately responds to identified diagnostic errors and applies appropriate corrective action
Level 4 Recognizes situations that may trigger professionalism lapses and intervenes to prevent lapses in self and others	Recognizes own frustration but models composure and humility when a colleague or supervisor challenges the fellow's opinion and shares the experience with peers
Recognizes and uses appropriate resources for managing and resolving ethical dilemmas	Recognizes and uses ethics consults, literature, risk-management/legal counsel to resolve ethical dilemmas
Level 5 Coaches others when their behavior fails to meet professional expectations	Identifies colleagues' failure to sign out cases in a timely manner and helps create a performance improvement plan
Serves as resource for colleagues who face ethical dilemmas	Engages stakeholders to address excessive turnaround times to decrease patient and provider frustrations that lead to unprofessional behavior
Assessment Models or Tools	 Direct observation Global evaluation Multisource feedback

	Oral or written self-reflection
	Simulation

Professionalism 2: Accountability and Conscientiousness Overall Intent: To take responsibility for one's own actions and the impact on patients and other members of the health care team **Milestones Examples** • Responds promptly to reminders from program administrator **Level 1** Responds promptly to instructions. requests, or reminders to complete tasks and • Timely attendance at conferences responsibilities Level 2 Takes appropriate ownership and • Completes tasks in a timely manner with attention to detail, including reporting of all performs tasks and responsibilities in a timely relevant ancillary studies manner with attention to detail **Level 3** Recognizes situations that may impact • Recognizes when completing a task will be challenging (e.g., when going out of town) and one's own ability to complete tasks and knows deadline for completing during vacation time responsibilities in a timely manner and describes • Completes tasks in stressful situations and preempts issues that would impede the impact on team completion of tasks (e.g., notifies attending of multiple competing demands, appropriately triages tasks, and asks for assistance from other residents or faculty members, if needed) • Reviews Case Logs, Fellow In-Service Assessment (FISA) scores, evaluations, and portfolio and develops a learning plan to address gaps/weakness in knowledge, case exposure, and skills • Identifies issues that could impede other learners from completing tasks and provides **Level 4** Anticipates and intervenes in situations that may impact others' ability to complete tasks leadership to address those issues and responsibilities in a timely manner • Escalates to communicating with program director if problem requires a system-based approach and needs addressing at a higher administrative level • Takes responsibility for potential adverse outcomes from mishandled specimen and professionally discusses with the interprofessional team • Recognizes need for addition of ancillary test to test menu and meets with stakeholders to **Level 5** Designs new strategies to ensure the needs of patients, teams, and systems are met implement • Compliance with deadlines and timelines Assessment Models or Tools Direct observation Multisource feedback Self-evaluations and reflective tools Simulation **Curriculum Mapping** Notes or Resources • Code of conduct from fellow/resident institutional manual Expectations of residency program regarding accountability and professionalism

Professionalism 3: Self-Awareness and Help-Seeking Overall Intent: To identify, use, manage, improve, and seek help for personal and professional well-being for self and others **Examples Milestones** Level 1 With assistance, recognizes status of • Acknowledges own response to patient's diagnosis of metastatic melanoma personal and professional well-being With assistance, recognizes limits in one's own Receives feedback on emotional response to a missed histopathologic feature knowledge/ skills Level 2 Independently recognizes the status of • Independently identifies and communicates impact of a personal family tragedy on ability one's own personal and professional well-being to provide patient care Independently recognizes limits in one's own After receiving a low score on the FISA exam, identifies barriers to effective study habits knowledge/skills and seeks help when appropriate Level 3 With assistance, proposes a plan to Works with program director to develop a strategy to support breast feeding after optimize personal and professional well-being returning from maternity leave With assistance, proposes a plan to remediate • Develops a plan with program director to improve study habits or improve limits in one's own knowledge/skills Level 4 Independently develops a plan to • Independently identifies ways to manage personal stress optimize one's own personal and professional well-being Independently develops a plan to remediate or Attends additional dermatopathology conferences after identifying weakness in specific improve limits in one's own knowledge/skills tumors and inflammatory lesions • Assists in organizational efforts to address resident well-being Level 5 Coaches others to optimize their personal and professional well-being Assessment Models or Tools Direct observation • Group interview or discussions for team activities Individual interview Institutional online training modules Self-assessment and personal learning plan **Curriculum Mapping** Notes or Resources • This subcompetency is not intended to evaluate a fellow's well-being. Rather, the intent is to ensure that each fellow has the fundamental knowledge of factors that affect well-

International and Communication Skills 4. Patient, and Family Contaged Communication	
Interpersonal and Communication Skills 1: Patient- and Family-Centered Communication Overall Intent: To deliberately use language and behaviors to form constructive relationships with patients, to identify communication	
	ses, and minimize them in the doctor-patient relationships; organize and lead communication
around shared decision making	ses, and minimize them in the dester patient relationships, organize and lead communication
Milestones	Examples
Level 1 Uses language and non-verbal behavior	Recognizes role of pathologist in patient- and family-centered communication
to demonstrate respect and establish rapport	Self-monitors and controls tone, non-verbal responses, and language and asks questions to invite patient/family participation
Identifies common barriers to effective communication (e.g., language, disability) while accurately communicating one's own role within the health care system	Identifies common communication barriers in patient care
Level 2 Establishes a relationship in straightforward encounters using active listening and clear language	Avoids pathology-specific jargon and restates patient perspective when discussing pathology results
Identifies complex barriers to effective communication (e.g., health literacy, cultural differences)	Recognizes the need for diagrams and pictures to communicate information on the role of dermatopathology in care of patients
Level 3 With supervision, sensitively and compassionately delivers medical information When prompted, reflects on personal biases	Acknowledges uncertainty in daily tasks
while attempting to minimize communication barriers	
Level 4 Independently, sensitively, and compassionately delivers medical information and acknowledges uncertainty and conflict	Recognizes difficulty in delivering pathology results for cases with uncertainty
Independently recognizes personal biases while attempting to proactively minimize communication barriers	Reflects on implicit bias during patient care, whether in encounters with patients or surrounding patient care issues
Level 5 Mentors others in the sensitive and compassionate delivery of medical information	Develops a fellowship curriculum on implicit bias

Direct observation Self-assessment including self-reflection exercises

Interpersonal and Con	nmunication Skills 2: Interprofessional and Team Communication
	the health care team (i.e., laboratory team, resident/fellow team, faculty/resident team,
	team in the program), including both inter- and intra-departmental and consultants, in both
straightforward and complex situations	
Milestones	Examples
Level 1 Uses language that values all members	Shows respect in health care team communications through words and actions such as in
of the health care team	requests for case re-review and urgent review of staged excisions • Uses respectful communication with laboratory and administrative staff members
	• Oses respectivi communication with laboratory and administrative stan members
Describes the utility of constructive feedback	Listens to and considers others' points of view, is non-judgmental and actively engaged, and demonstrates humility
Level 2 Communicates information effectively with all health care team members	Confirms receipt of critical diagnoses such as melanoma, unexpected diagnoses such herpesvirus infections, and significant diagnostic addenda or amendments and follows up with laboratory and administrative staff to ensure task completion
	 Demonstrates active listening by fully focusing on the speaker (other health care provider, patient), actively showing verbal and non-verbal signs (eye contact, posture, reflection, questioning, summarization)
	Communicates clearly and concisely in an organized and timely manner during and after sign-out, as well as with the health care team in general
Solicits feedback on performance as a member of the health care team	Seeks feedback during and after sign-out to align performance with expectations
Level 3 Uses active listening to adapt communication style to fit team needs	Verifies understanding of feedback from members of the health care team through closed-loop communication
	Raises concerns or provides opinions and feedback when needed to others on the team
Integrates feedback from team members to improve communication	Respectfully provides feedback to more junior members of the medical team for the purposes of improvement or reinforcement of correct knowledge, skills, and attitudes, when appropriate
	Uses in-basket communication in electronic health record for critical diagnoses after clinicians note that this method is more reliable than verbal communication
	Acknowledges specific roles of administrative and laboratory team members so that communication and troubleshooting become more efficient
Level 4 Coordinates recommendations from different members of the health care team to optimize patient care	Offers suggestions to negotiate or resolve conflicts among health care team members; raises concerns or provides opinions and feedback, when needed, to superiors on the team

	Following consensus conferences and interdisciplinary tumor boards, coordinates retrieval of tissue blocks for additional testing, prepares diagnostic addendums, or requests additional information from team members to ensure recommendations are carried out
Communicates feedback and constructive criticism to superiors	 After noting challenges in learning from select complex cases during sign out with residents, respectfully requests additional one-to-one clinical instruction from faculty after sign-out Adapts communication strategies in handling complex situations
Level 5 Models flexible communication strategies that value input from all health care team members, resolving conflict when needed	Teaches more junior health care team members to resolve conflicts and provide effective feedback
Facilitates regular health care team-based feedback in complex situations	Organizes a team meeting to discuss a new workflow for cases received from inpatient consultation that promotes prompt reporting and communication of preliminary findings to hospital services
Assessment Models or Tools	 Direct observation Global assessment Multisource feedback Record or chart review for professionalism and accuracy in written communications Simulation encounters

Interpersonal and Communication Skills 3: Communication within Health Care Systems Overall Intent: To effectively communicate using a variety of methods	
Milestones	Examples
Level 1 Understands institutional policy(ies) about communication involving protected health information (PHI)	 Identifies when it is acceptable to include protected health information in communications, e.g., in emails or phone calls to referring physicians or other members of the health care team for a particular patient Understands what patient information should be safeguarded while discussing cases for educational purposes with residents and students
Identifies institutional and/or departmental structures to communicate concerns about the health care system	Identifies institutional and departmental communication hierarchy for reporting concerns and patient safety issues
Level 2 Appropriately selects forms of communication based on context and urgency of the situation	 Identifies method for sharing results needing urgent attention in line with institutional and departmental policies Uses appropriate technology for communicating results to inpatient team (secure emails or secure text messaging apps) per institutional and departmental policies
Respectfully communicates concerns about the health care system	Recognizes that a communication breakdown has happened and respectfully brings the breakdown to the attention of the faculty member
Level 3 With guidance, communicates relevant information while safeguarding PHI	 Communicates opportunities for improvement in the laboratory information system (LIS)/EHR interface Knows when to direct concerns locally, departmentally, or institutionally, i.e., appropriate escalation
Uses institutional and/or departmental structures to communicate constructive suggestions to improve the health care system	 Uses appropriate method when sharing results needing urgent attention in line with institutional and departmental policies Participates in lab meetings to debrief breakdowns in communication
Level 4 Independently communicates relevant information while safeguarding PHI	Talks directly to a colleague or faculty member about breakdowns in communication to prevent recurrence
Independently raises concerns with appropriate stakeholders to improve the health care system	 Participates in task force to update policy for sharing critical or unexpected results Safeguards protected health information during departmental conferences (tumor board, grand rounds) as appropriate, particularly in the setting of virtual conferences given potential for outside participants

Level 5 Guides departmental or institutional policies and procedures regarding PHI in	Leads a task force established by the hospital QI committee to develop a plan to improve house staff hand-offs
communications	In lab meetings, offers solutions to breakdowns in communications
Leads discussions with community stakeholders to improve the health care system	Participates in institutional or inter-department task force including community stakeholders to implement improvements in the LIS/EHR interface
Assessment Models or Tools	Multisource feedback
	 Observation of communication of critical or unexpected results with referring providers, inpatient teams
	Observation of presentation of cases during departmental/interdepartmental conferences
Curriculum Mapping

Promoting responsible electronic documentation: validity evidence for a checklist to assess progress notes in the electronic health record. <i>Teach Learn Med</i>. 2017;29(4):420-432. https://www.tandfonline.com/doi/abs/10.1080/10401334.2017.1303385?journalCode=htlm20.2021. Haig, K.M., Sutton, S., Whittington, J. SBAR: A shared mental model for improving communications between clinicians. <i>Jt Comm J Qual Patient Saf</i>. 2006;32(3):167-75. https://www.sciencedirect.com/science/article/abs/pii/S1553725006320223?via%3Dihub.2021.

To help programs transition to the new version of the Milestones, the ACGME has mapped the original Milestones 1.0 to the new Milestones 2.0. Indicated below are where the subcompetencies are similar between versions. These are not exact matches, but are areas that include similar elements. Not all subcompetencies map between versions. Inclusion or exclusion of any subcompetency does not change the educational value or impact on curriculum or assessment.

Milestones 1.0	Milestones 2.0
PC1: Dermatopathologic Diagnosis	
PC2: Ancillary Testing	PC3: Ancillary Studies
	MK3: Ancillary Studies
MK1: Histopathologic Patterns	PC1: Visual Recognition – Neoplastic Dermatopathology
	PC2: Visual Recognition – Inflammatory and Non-Neoplastic
	Dermatopathology
	MK1: Neoplastic Dermatopathology
	MK2: Inflammatory Dermatopathology
MK2: Immunohistochemistry	PC3: Ancillary Studies
	MK3: Ancillary Studies
SBP1: Health Care Teams	SBP3: Physician Role in Health Care System
SBP2: Patient Safety	SBP1: Patient Safety and Quality Improvement
	SBP2: Systems Navigation for Patient-Centered Care
	SBP4: Accreditation, Compliance, and Quality
PBLI1: Evidence-based Practice	PBLI1: Evidence-Based Practice and Scholarship
PBLI2: Process Improvement and Patient Safety	SBP1: Patient Safety and Quality Improvement
PROF1: Accountability, Honesty, and Integrity	PROF1: Professional Behavior and Ethical Principles
	PROF2: Accountability and Conscientiousness
PROF2: Giving and Receiving Feedback	PBLI1: Reflective Practice and Commitment to Personal Growth
	PROF3: Self-Awareness and Help-Seeking
	ICS1: Patient- and Family-Centered Communication
ICS1: Personnel Management and Conflict Management	ICS2: Interprofessional and Team Communication
	ICS3: Communication within Health Care Systems
ICS2: Diagnostic Reporting	PC4: Reporting
